

The SmartMover

Makes light work of moving heavy cages

MasterMover[®]
World leader in pedestrian operated tugs

Town centre roll cage deliveries are tough work

“Convenience” is the buzz word for retailers, but what’s convenient for the consumer is often plain hard work for the delivery driver or shop worker. Those last few yards from tail lift to store are often the toughest of the whole journey. Kerbs, cobbles, slopes and uneven ground all come together to make moving a heavy roll cage an exhausting and sometimes dangerous task.

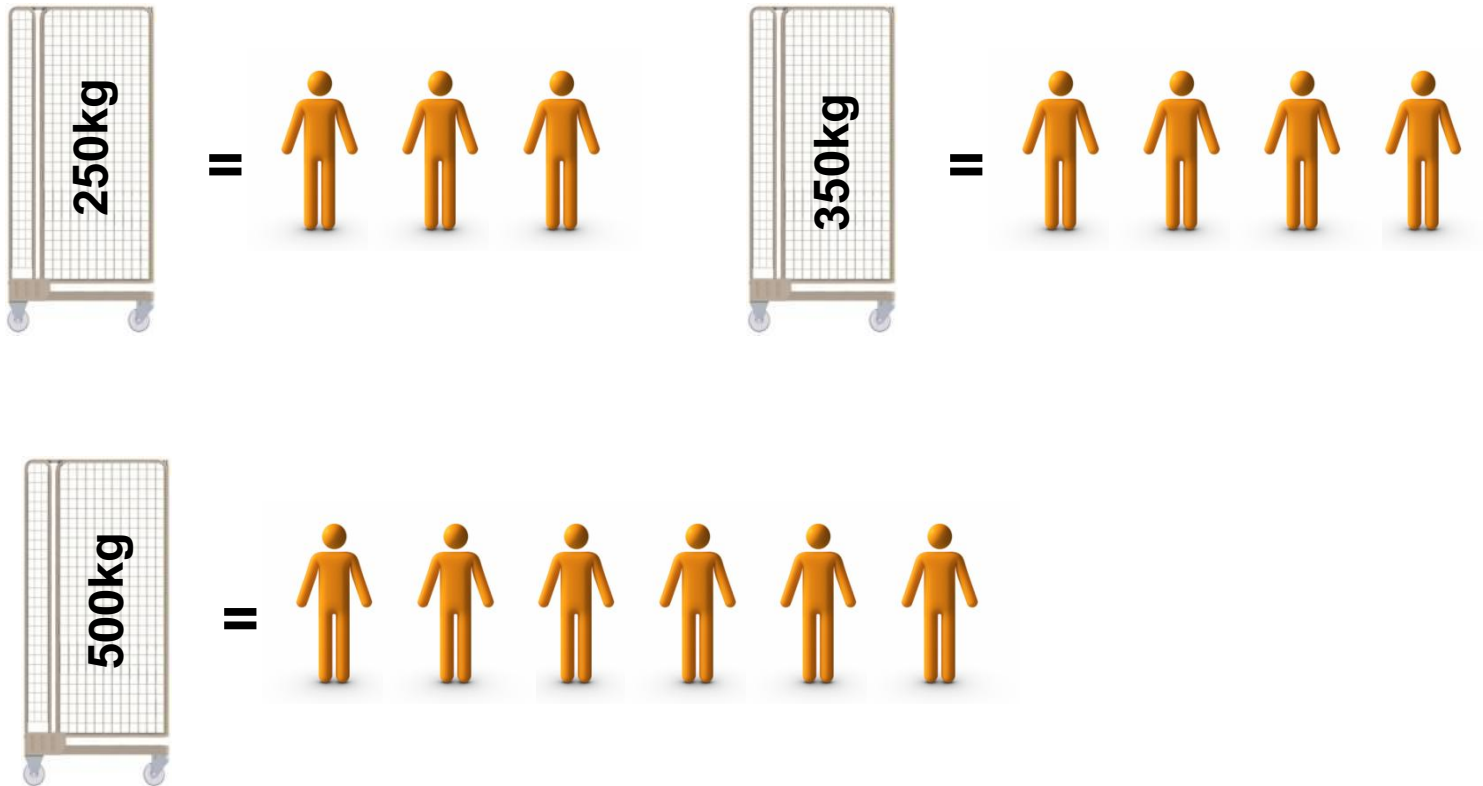

MasterMover have brought together over 15 years of roll cage moving experience and designed the complete solution for town centre tail lift deliveries .

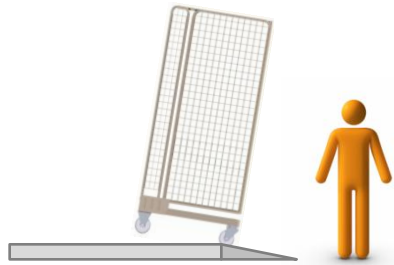

How heavy are your roll cages?

Most retailers apply an upper weight limit on the roll cages they distribute in an effort to make moving them a little less arduous. Even with the limits applied, have you thought about how heavy they REALLY are?

The weight of the average adult male in the UK is 12st 8lbs (80kg)

Now you've got a good idea of the weight involved, imagine how you would cope in these situations...

Cages toppling off the tail lift

Up hill slopes

Down hill slopes

Dropped kerbs

The SmartMover is the solution!

A hydraulic clamp creates a rock solid connection between the roll cage and the machine

The Smartmover cleverly directs the weight in the roll cage onto its wheels.

This maximises grip even in the worst conditions!

0.3m² is the tiny footprint of the SmartMover.

Nothing else matches its power in such a small package

SmartMover Checklist

Powerful motor	Two powerful motors take the strain so you don't have to
Braking	The Smartmover's onboard computer can reverse the motors and apply powerful brakes which stop the load in an instant.
Speed control	A variable speed control makes manoeuvring cages in tight spaces a piece of cake
Connection	The connection head rotates and flexes which gives unrivalled manoeuvrability and ensures maximum grip at all times

Reduce risk

The SmartMover can help you eliminate both roll cage topple incidents and the manual handling injuries commonly associated with roll cage movement. This shows through on the bottom line by reducing sickness related absence and costly compensation claims.

Roll two trips into one

Restricted delivery time slots apply even greater pressure to an already difficult task. The Smartmover's unrivalled power holds the key to operators moving two or even three roll cages in a single trip. Just clip the cages together using a simple linkage and deliveries can be completed in a fraction of the time.

Playing a part in lean logistics

A study by the Department for Transport found that, on average, grocery retailers used only 55% of their vehicles load carrying capacity.

By removing the need for cage weight limits the SmartMover could be the key to achieving better weight utilisation in each delivery vehicle
